

Independently Assure Timely and Accurate Process Execution

How do you know your systems are processing information in a timely manner? Is your information following the correct processing sequence as it flows from point to point within your processes?

Infogix Assure Tracking Controls enable you to:

- Validate the accuracy and timeliness of transactions.
- Provide visibility into business processes to ensure that all

of your information arrives in the right place, at the right time.

- Follow user-defined business rules to compare information in a single processing step, or across applications.

As part of the Infogix Assure solution, Infogix Assure Tracking Controls help eliminate errors and ensure information is handled by the correct processes in a timely manner.

Proven Benefits

Infogix Assure Tracking Controls allow you to:

- Ensure business continuity and Service Level Agreements for both internal and external customers.
- Automate manual controls.
- Track and trace transactions throughout your enterprise.
- Minimize research time for missing or delayed transactions.
- Identify bottlenecks in your processes.
- Prevent the propagation of information errors.
- Ensure regulatory compliance – and satisfy internal and external audits.
- Avoid or reduce financial loss due to information errors.

The Information Integrity Experts™

At Infogix, we have over 25 years of Information Integrity expertise. Many of the world's leading corporations depend on us. In fact, many have mandated Infogix Controls as the standard. And unlike other available options, Infogix Controls apply to all business processes across your enterprise – to ensure that all of your information is accurate, consistent, and reliable.

“As part of the Infogix Assure solution, Infogix Assure Tracking Controls help eliminate errors and ensure information is handled by the correct processes in a timely manner.”

Key Features

Infogix Assure Tracking Controls provide a number of key features to help ensure the integrity of your critical business information.

Latency Tracking

Verify transactions pass from one processing point to another within a specified time period. These controls let you set a time span threshold between any two points in a process. This means you can:

- Provide early alerts of information delays anywhere in the system.
- Detect and correct issues before they affect downstream applications.

- Specify variable latency periods based on complex calendar and time period calculations.

Arrival Tracking

Ensure that transactions expected to arrive at a particular processing point actually get there. These controls detect when information does not arrive at the designated processing point, based on its presence at an earlier processing point.

This makes it possible to:

- Alert appropriate teams of unexpected delays.
- Diagnose and correct processing delays before customers are impacted.
- Ensure time-based SLAs are met.

Content Tracking

Content Tracking works with Latency and Arrival Tracking to verify that information arriving at each processing point is accurate and unaltered. For example, payment transactions that move through applications residing in multiple locations can be tracked and reconciled through the process.
