

Q. What is Infogix Assure?

A. Infogix **Assure**[™] is an enterprise software solution that delivers rules-based automated information controls. It is comprised of a technical platform that hosts numerous types of controls. Each control type performs specific information or process checks to ensure enforcement of business rules (e.g., two accounts balance, transaction values meet limits), and automation of internal controls. Infogix **Assure** gives business process managers, application owners, and audit/compliance staff the ability to implement a complete set of information controls, and interact with a standardized set of results.

Q. What is the difference between the ACR distributed platform products and Infogix Assure?

A. **ACR**[®] distributed platform products are ported COBOL versions that support mainframe implementations that need some distributed platform support. Infogix **Assure** is a native Java application that supports distributed environments. It leverages the latest technology architectures, and is a full SOA component approach. Both are integrated, and play an integral part in establishing a complete controls platform necessary for an enterprise risk management architecture and strategy.

Q. What platforms does Infogix Assure support?

A. See the Infogix **Assure** technical specifications for the latest platform support information.

Q. Does Infogix Assure communicate with Infogix ACR products?

A. Yes. Infogix **Assure** can extract information from **ACR/Summary**[®] and **ACR/Detail**[®] history files via **ACR/Connector**[™].

Q. What is ACR/Connector?

A. A cross-platform tool that makes it possible to access, transfer, and reconcile information across platforms.

Q. Do I need ACR/Connector to use Infogix Assure?

A. No, **ACR/Connector** is only required to integrate with **ACR/Detail** and **ACR/Summary** sources.

Q. Can Infogix Assure run on the mainframe?

A. The Infogix **Assure** server does not run on the mainframe. However, Infogix **Assure** can gather data from the mainframe as a remote client without the **ACR** products present.

Q. Can I migrate my existing ACR product on distributed platforms to Infogix Assure?

A. We have no automatic mechanism to import existing **ACR** product definitions into Infogix **Assure**; however, we can provide services to help you migrate.

Q. Will Infogix continue to expand ACR/Summary and ACR/Detail on distributed platforms?

A. Yes, we will continue to expand the **ACR/Summary** and **ACR/Detail** capability. We will also continue to add even more value through complimentary products such as Infogix **Insight**.

Q. What is Infogix Insight?

A. Infogix **Insight** provides a real-time, aggregate view of all Infogix automated information controls. It provides an immediate, personalized status for information controls across your enterprise.

Q. How can I find out more about Infogix Assure?

A. Please contact your customer representative to schedule a Webinar or a meeting to learn more about our complete automated information controls solutions. For more information, call 800-950-5225.
