

Accelerating Data Migration

Executive Summary

Client: Telecommunications Company

Industry: Telecomm

Solution: Data360®

Challenges:

- Modernizing legacy billing operations support systems
- Preserving data integrity for massive amounts of transaction data
- Required an analytics solution for data quality assessment, root cause analysis and issues prioritization and resolution

Results:

- **Reduced time, cost and effort required for data migration with traditional SQL-based methods**
- **Faster root-cause analysis facilitated rapid resolution with minimal customer impact**
- **Visual assurance of data and process integrity to stakeholders across business units (e.g., legal, regulatory and audit)**
- **Enabled accurate data transformation on a massive scale with verifiable results**

Overview

This telecommunications company has a comprehensive services portfolio which provides broadband Internet, fixed telephone and mobile device services, and television and on-demand entertainment for millions of customers across residential, business, government and wholesale markets.

With rapidly advancing technology, the company identified a pressing need to update its core legacy systems for billing and operations. For this data migration, they needed a fast and efficient approach that would ensure business continuity and protect data integrity through the process.

The Challenge

As the company updated its legacy billing support system (BSS) and operations support system (OSS) to modern data center applications, one of the biggest tasks – and source of potential problems – was migrating data from the legacy system to the new one. Every application formats data differently, and ensuring data integrity as data is moved and transformed is critical to preserve business continuity and safeguard regulatory compliance.

A traditional approach would use an SQL process to translate formats from the legacy system into the requisite

new system formats. But this customer needed to consolidate hundreds of terabytes of transaction data from several legacy applications into a single new system. Developing an SQL-based solution would take too long, and verifying the accuracy of the data migration would be nearly impossible.

For such a large and complex project, the company required a scalable solution with analytical capabilities to assess data quality, identify errors, uncover root causes and prioritize fixes according to potential impact on revenue or customer experience.

The Solution

Data360 is an agile data management and analytic solution for both business and IT users. It empowered this telecomm to better manage their data migration project, and continuously improve business results. Its agile capabilities allowed the company to rapidly integrate diverse data, easily discover elusive insights and continuously monitor business operations to expose anomalies, outliers or patterns. These capabilities are used to verify compliance, uncover business improvement opportunities and guard against risks.

Data360 enabled the company to smoothly and successfully complete multiple data migration projects,

including the process of migrating billing data from several legacy systems into a modern, consolidated system. Throughout the migration, the company needed to implement compliance controls. Data360 verified the performance of the new system by checking its ability to generate accurate bills, preventing both undercharges and overcharges.

This migration began with a pilot of several thousand customers, where Data360 associated extracted billing information with product pricing and tariff plans, and then recalculated bills. The analysis then identified discrepancies with the pro forma bill from the new system and reconciled the differences before the normal billing run.

After the successful pilot phase, the customer migrated data in larger batches, using Data360 to recalculate (a.k.a. re-rate) bills to mimic the billing platform. The customer configured the solution to analyze billing accuracy, catch errors, identify the root causes of errors and fix issues in time for billing runs. Where an SQL-based data migration would have taken months, this telecomm completed the entire migration in just a few weeks.

Data360 Benefits:

- **Handles Big Data** — Rapidly processes billions of transactions, while allowing the organization to

maintain existing investments in specialized business applications and systems.

- **Increases Business Agility** — Flexible data management and analytic capabilities enable analysts to integrate multiple data sources and change business logic up to ten times faster than traditional tools. Greater accuracy and faster analysis help decision makers anticipate trends instead of chase them.
- **Supports Continuous Business Control** — Continuous monitoring exposes data anomalies and patterns to guard against risks and uncover opportunities for business improvement.
- **Builds Trust in Data Quality** — Easy-to-interpret, visual interface improves transparency into analytic logic and data, enabling analysts to generate, validate and communicate trustworthy results.

Data360's agile capabilities allowed the company to rapidly integrate diverse data, easily discover elusive insights and continuously monitor business operations to expose anomalies, outliers or patterns.

About Infogix

In our fourth decade as an industry pioneer, Infogix continues to partner with its customers around the globe to provide a broad range of flexible and configurable solutions to increase trust in their critical data assets enterprise-wide to achieve their business objectives. As the only all-inclusive data management and governance solution that integrates intelligent data quality, enterprise data governance and advanced analytics, the Data360 platform allows users of every skillset to explore, catalog, validate, prepare and analyze data in real time, accelerating time to insights and giving you the power to trust every business decision. To learn more, visit www.infogix.com or @Infogix.

Develop, implement and optimize your data management and governance strategy with Infogix. Visit www.infogix.com or call +1.630.505.1800 (US, Canada and International), +44 1242 674 137 (UK and Europe).
